

ASSP VOLTAGE DETECTOR

MB3761

VOLTAGE DETECTOR

Designed for voltage detector applications, the Fujitsu MB3761 is a dual comparator with a built-in high precision reference voltage generator. Outputs are open-collector outputs and enable use of the OR-connection between both channels. Both channels have hysteresis control outputs. Because of a wide power supply voltage range and a low power supply current, the MB3761 is suitable for power supply monitors and battery backup systems.

- Wide power supply voltage range: 2.5 V to 40 V
- Low power and small voltage dependency supply current: 250 μ A typical.
- Built-in stable low voltage generator: 1.20 V typical.
- Easy-to-add hysteresis characteristics.
- Package: 8-pin Plastic SIP Package (Suffix: -PS)
8-pin Plastic DIP Package (Suffix: -P)
8-pin Plastic FPT Package (Suffix: -PF)

ABSOLUTE MAXIMUM RATINGS (See NOTE)

Rating	Symbol	Value	Unit
Power Supply Voltage	V _{CC}	41	V
Output Voltage	V _O	41	V
Output Current	I _O	50	mA
Input Voltage	V _{IN}	-0.3 to +6.5	V

Figure 15. Response Characteristics

- Voltage Threshold Levels (V_{ccl} and V_{cch}) and Hysteresis Width can be changed by the resistors (R_1 through R_4).

$$V_{ccl} = \frac{R_1 + R_2 + R_3}{R_3} V_{TH}$$

$$V_{cch} = V_{ccl} + \frac{R_1 (R_2 + R_3)}{R_3 R_4} V_{TH}$$

- Power-On Reset Time is provided by the following approximate equation:

$$t_{rst} = -C_1 R_4 \cdot \ln \left\{ 1 - \frac{V_{TH}}{V_{CC}} \left(1 + \frac{R_1}{R_2 + R_3} \right) \right\}$$

- The recommended value of h_{FE} of the external transistor is from 50 to 200.
- In the case of an instant power fail, the remaining charge in C_1 effects t_{rst} .
- If necessary, the reversed output is provided on HYS terminal
